

## **GATES THERMALPRO ELECTRIC WATER PUMPS**

# **RADIAL FLUX 30-120W PLATFORM**

ThermalPro Radial Flux water pumps are manufactured for durable, worry-free operation for the life of your vehicle. Constructed using only premium materials, we rigorously function and leak test our water pumps and components, like seals and bearings, to ensure optimum performance under intense driving conditions.

| SYSTEM OVERVIEW      |                                   |  |
|----------------------|-----------------------------------|--|
| Model                | 30 - 120W platform                |  |
| Motor type           | Three-phase brushless Radial Flux |  |
| Motor mass           | >790g                             |  |
| Voltage range        | 12V to 24V                        |  |
| Flow rate (I/min)    | <45                               |  |
| Max. operating speed | <6000 rpm                         |  |
| Control strategy     | PWM, LIN, CAN                     |  |
| Coolant temperature  | -40°C to 120°C (-40°F to 248°F)   |  |
| Ambient temperature  | -40°C to 135°C (-40°F to 275°F)   |  |
| IP rating            | IP67                              |  |

# **GATES RADIAL FLUX EWP DESIGN:**

## **CHASSIS OR DIRECT MOUNTING**

Flexibility to available package

## **RADIAL COILS**

Silent, reliable, low cost design

### **CONTROL BOARD**

PWM communication

#### **MODULAR AND SCALABLE**

Creating a "family" architecture to different application requirement

| MOTOR DESIGN                 |                                                             |  |
|------------------------------|-------------------------------------------------------------|--|
| Motor details                | Up to 9 tooth 12 poles                                      |  |
| Motor housing material       | ADC or glass reinforced plastic                             |  |
| Volute housing and impeller  | ADC or glass reinforced plastic                             |  |
| Winding type                 | Non-overlap concentrated                                    |  |
| Winding material             | Copper or aluminum                                          |  |
| Stator & rotor core material | SMC (Soft Magnetic Composite)                               |  |
| Permanent magnet             | Ferrous / Rare earth                                        |  |
| Temperature protection       | Over temperature                                            |  |
| Voltage protection           | Overvoltage, undervoltage, short circuit                    |  |
| Load protection              | No-load, overload, locked impeller, anti-reverse connection |  |
| Coolant specification        | 50:50 ethylene glycol to water ratio                        |  |

|                                  | STANDARDS                                       |
|----------------------------------|-------------------------------------------------|
| Functional safety                | ISO-26262*                                      |
| Safety of intended functionality | ISO 21448                                       |
| Cyber security                   | ISO 21434*                                      |
| EMC                              | ISO 11451 / ISO 11452 / ISO 10605 / CISPR25     |
| Temperature shock test           | DIN EN 60068-2-14                               |
| Dust test                        | ISO 20653                                       |
| Thermal cycle                    | IEC 60068-2-14                                  |
| Vibration test                   | ISO 16750-3 / DIN EN 60068-2-6 / DIN 60068-2-64 |
| VIDITATION LEST                  | 130 16750-3 / DIN EN 60066-2-6 / DIN 60066-2-64 |
